

## OVERVIEW

Central to GDPR is an individual's right to access their personal information held by others. If an individual wants access to their information they must make a Subject Access Request (SAR).

## CHALLENGES

Organizations have 30 days to respond

Nearly 70% of data is considered ROT (Redundant, Obsolete, or Trivial)

Difficulty complying with GDPR articles across large organizations

Lack of tools to comply with Article 17 'Right to be forgotten' across multiple endpoints

Creating reports and responding to data subject requests for information

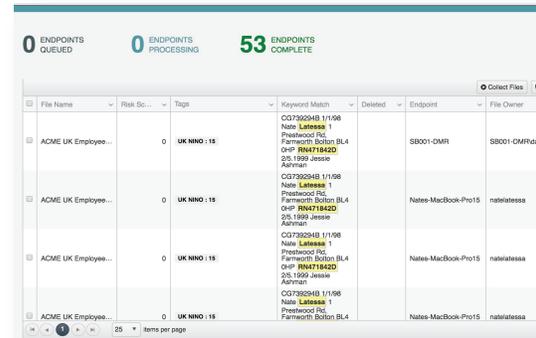

Providing for Article 20 - Right to data portability by exporting only selected files required by controllers or data subjects

## HEUREKA SOLUTION

Heureka provides the ability to rapidly respond to Subject Access Requests by searching unstructured data across your enterprise using a single interface, regardless of location. Users can search and analyze data at the source of creation without the need to move a single file.

### ENDPOINT SERVICE

Heureka's intelligent endpoint service creates a full text and metadata index, which is stored locally on each endpoint thus eliminating the need to copy and centralize data. Each index is updated daily with new or modified data, and happens silently in the background, with minimal impact to end-user productivity.

File Name	Risk Score	Tags	Keyword Match	Deleted	Endpoint	File Owner
ACME UK Employee...	0	UK NINO: 15	C0729204B 1/1/98 Nate Latessa 1 Prestwood Pl, Farmworth Bottom BL4 04P RN471842D 20.1.1999 Jesse Aubman		SB001-DMR	SB001-DMR/ro

### CENTRALIZED SEARCH

Heureka's command console is the heart of the system giving you the ability to initiate searches across any number of selected endpoints. Search results are returned for further analysis allowing you to surgically target only responsive information and perform actions such as collect, quarantine, or delete. Automated tools such as scheduled search and file categorization are built-in.

## BENEFITS

Single platform used to cover multiple areas of GDPR compliance

Designed to search for and protect data subject privacy

Ability to map sensitive data enterprise-wide with automatic data classification

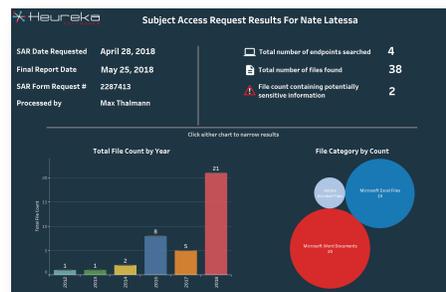

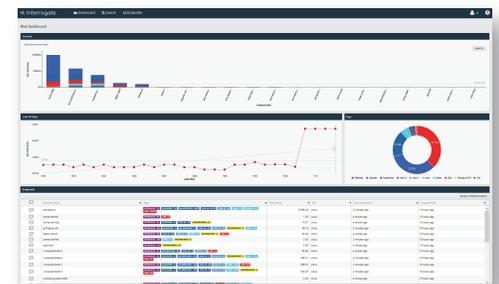

Eliminate ROT to help reduce GDPR compliance burden

Detailed breach impact reports add visibility to potential risk

Perform and audit 'Right to be forgotten' requests

## KEY FEATURES

Heureka's automated risk dashboard displays high-risk endpoints along with risk types including PII information. Current and 30-day views are instantly available. Search for keywords, complex queries or regular expressions including specific pattern matches. File-level actions such as quarantine or delete facilitate the ability to comply with GDPR's Article 17 "Right to be forgotten".

- Single user interface manages all endpoints
- Define and locate subject data with location
- Search and analyze in place, before collecting
- Find documents by keywords, queries, tags or regular expressions
- Collect, quarantine, delete files or create SAR reports
- Auto-classification and/schedule searches
- Reduce false-positives with combination searching (RegEx & Keyword/Query)
